

## CLAIMS

1. A method for treatment of patients using embryonic cell suspensions comprising:  
preparing of a suspension containing living embryonic cells selected from the group  
consisting of hematopoietic liver cells, hematopoietic spleen cells, combination thereof, and  
pharmaceutically acceptable liquid medium, 1 ml of said suspension containing:  
5,200 $\times 10^6$

- a) nucleated cells:  $5-200 \times 10^6$ ,  
b) colony-forming units of granulocyte/macrophage (CFU-GM):  $20-200 \times 10^3$ ,  
c) colony-forming units of granulocyte, erythrocyte, monocyte/macrophage, and megakaryocyte (CFU GEMM)  $0.5-10 \times 10^3$ , and  
d) progenitor cells, CD<sub>34</sub> (PC CD<sub>34</sub>)  $1-20 \times 10^6$ .

and at least one administering of such suspension, prepared *ex tempore* or frozen at cryogenic temperatures and subsequently thawed, to the body of a patient,

**wherein** in addition to the above main suspension of embryonic tissues, at least one additional suspension is prepared, said additional suspension containing cells selected from the group consisting of hematopoietic liver stem cells, hematopoietic spleen stem cells, hepatocytes, thymocytes, epitheliocytes of the primary alimentary canal, brain nervous cells, and combination of cells of at least two said kinds, and at least one such additional suspension is administered, along with the main one, to the patient's body.

2. The method of Claim 1, wherein at least one said additional suspension is administered to the patient's body concurrently with the main suspension.

3. The method of Claim 2, **wherein** prior to administration to the patient's body, at least one said additional suspension is combined with the main suspension.

4. The method of Claim 1, **wherein** said main suspension and at least one said additional suspension are administered consecutively to the patient's body.

5. The method of Claim 4, **wherein** said additional suspension is administered to the patient's body after administering the main suspension.

6. The method of Claim 4, **wherein** said main suspension is administered to the patient's body after administering the additional suspension.

7. The method of Claim 1, **wherein said** main and additional suspensions are prepared from tissues of the same embryo.
